

## FULL TABLE OF CONTENTS (KÉRY 2010)

This is the full table of contents of the book. Page numbers are approximate only, but give an indication of the relative lengths of each section.

Preface	p. 10
Acknowledgements	p. 13
1. Introduction	p. 14
1.1. Advantages of the Bayesian approach to statistics	p. 14
1.2. So why then isn't everyone a Bayesian ?	p. 16
1.3. WinBUGS	p. 16
1.4. Why this book ?	p. 17
1.4.1. This is also an R book	p. 18
1.4.2. Juxtaposition of classical and Bayesian analyses	p. 18
1.4.3. The power of simulating data	p. 19
1.5. What this book is not about: Theory of Bayesian statistics and computation	p. 20
1.6. Further reading	p. 21
1.7. Summary	p. 23
2. Introduction to the Bayesian analysis of a statistical model	p. 24
2.1. Probability theory and statistics	p. 24
2.2. Two views of statistics: Classical and Bayes	p. 25
2.3. Importance of modern algorithms and computers for Bayesian statistics	p. 29
2.4. Markov chain Monte Carlo (MCMC) and Gibbs sampling	p. 30
2.5. What comes after MCMC ?	p. 31
2.6. Some shared challenges in the Bayesian and the classical analysis of a statistical model	p. 34
2.7. Pointer to special topics in this book	p. 37
2.8. Summary	p. 37
Exercise	p. 38
3. WinBUGS	p. 39
3.1. What is WinBUGS ?	p. 39
3.2. Running WinBUGS from R	p. 40
3.3. WinBUGS frees the modeler in you	p. 40
3.4. Some technicalities and conventions	p. 41
4. A first session in WinBUGS: The "model of the mean"	p. 43
4.1. Introduction	p. 43
4.2. Setting up the analysis	p. 44
4.3. Starting the Gibbs sampler	p. 52
4.4. Summarizing the results	p. 52
4.5. Summary	p. 56
Exercises	p. 57
5. Running WinBUGS from R via R2WinBUGS	p. 58
5.1. Introduction	p. 58
5.2. Data generation	p. 59
5.3. Analysis using R	p. 59
5.4. Analysis using WinBUGS	p. 60
5.5. Summary	p. 66
Exercises	p. 66
6. Key components of (generalised) linear models: Statistical distributions and the linear predictor	p. 68
6.1. Introduction	p. 68
6.2. Stochastic part of linear models: Statistical distributions	p. 69
6.2.1. Normal distribution	p. 71
6.2.2. Continuous uniform distribution	p. 72
6.2.3. Binomial distribution: The "coin-flip distribution"	p. 73
6.2.4. Poisson distribution	p. 75
6.3. Deterministic part of linear models: Linear predictor and design matrices	p. 78

6.3.1. The model of the mean	p. 80
6.3.2. t-test	p. 81
6.3.3. Simple linear regression	p. 85
6.3.4. One-way analysis of variance (one-way ANOVA)	p. 88
6.3.5. Two-way analysis of variance (two-way ANOVA)	p. 90
6.3.6. Analysis of covariance (ANCOVA)	p. 94
6.4. Summary	p. 101
Exercise	p. 102
7. t-Test: Equal and unequal variances	p. 103
7.1. t-test with equal variances	p. 103
7.1.1. Introduction	p. 103
7.1.2. Data generation	p. 103
7.1.3. Analysis using R	p. 105
7.1.4. Analysis using WinBUGS	p. 105
7.2. t-test with unequal variances	p. 108
7.2.1. Introduction	p. 108
7.2.2. Data generation	p. 110
7.2.3. Analysis using R	p. 110
7.2.4. Analysis using WinBUGS	p. 110
7.3. Summary and a comment on the modeling of variances	p. 112
Exercises	p. 112
8. Normal linear regression	p. 113
8.1. Introduction	p. 113
8.2. Data generation	p. 114
8.3. Analysis using R	p. 114
8.4. Analysis using WinBUGS	p. 114
8.4.1. Fitting the model	p. 115
8.4.2. Goodness-of-Fit assessment in Bayesian analyses	p. 116
8.4.3. Forming predictions	p. 120
8.4.4. Interpretation of confidence vs. credible intervals	p. 122
8.5. Summary	p. 124
Exercises	p. 124
9. Normal one-way ANOVA	p. 125
9.1. Introduction: Fixed and random effects	p. 125
9.2. Fixed-effects ANOVA	p. 128
9.2.1. Data generation	p. 128
9.2.2. Maximum likelihood analysis using R	p. 129
9.2.3. Bayesian analysis using WinBUGS	p. 130
9.3. Random-effects ANOVA	p. 132
9.3.1. Data generation	p. 132
9.3.2. Restricted maximum likelihood (REML) analysis using R	p. 133
9.3.3. Bayesian analysis using WinBUGS	p. 134
9.4. Summary	p. 136
Exercises	p. 136
10. Normal two-way ANOVA	p. 137
10.1. Introduction: Main and interaction effects	p. 137
10.2. Data generation	p. 139
10.3. Aside: Using simulation to assess bias and precision of an estimator	p. 141
10.4. Analysis using R	p. 142
10.5. Analysis using WinBUGS	p. 142
10.5.1. Main-effects ANOVA using WinBUGS	p. 142
10.5.2. Interaction-effects ANOVA using WinBUGS	p. 144
10.5.3. Forming predictions	p. 145
10.6. Summary	p. 146
Exercises	p. 146

11. General linear model (ANCOVA)	p. 148
11.1. Introduction	p. 148
11.2. Data generation	p. 150
11.3. Analysis using R	p. 151
11.4. Analysis using WinBUGS (and a cautionary tale about the importance of covariate standardization)	p. 152
11.5. Summary	p. 155
Exercises	p. 156
12. Linear mixed-effects model	p. 157
12.1. Introduction	p. 157
12.2. Data generation	p. 159
12.3. Analysis under a random-intercepts model	p. 162
12.3.1. REML analysis using R	p. 162
12.3.2. Bayesian analysis using WinBUGS	p. 162
12.4. Analysis under a random-coefficients model without correlation between intercept and slope	p. 164
12.4.1. REML analysis using R	p. 164
12.4.2. Bayesian analysis using WinBUGS	p. 164
12.5. The random-coefficients model with correlation between intercept and slope	p. 166
12.5.1. Introduction	p. 166
12.5.2. Data generation	p. 167
12.5.3. REML analysis using R	p. 168
12.5.4. Bayesian analysis using WinBUGS	p. 169
12.6. Summary	p. 171
Exercises	p. 171
13. Introduction to the Generalised linear model (GLM): Poisson t-test	p. 172
13.1. Introduction	p. 172
13.2. An important but often forgotten issue with count data	p. 174
13.3. Data generation	p. 175
13.4. Analysis using R	p. 176
13.5. Analysis using WinBUGS	p. 176
13.5.1. Check of MCMC convergence and model adequacy	p. 177
13.5.2. Inference under the model	p. 180
13.6. Summary	p. 182
Exercises	p. 183
14. Overdispersion and offsets in the GLM	p. 184
14.1. Overdispersion	p. 184
14.1.1. Introduction	p. 184
14.1.2. Data generation	p. 185
14.1.3. Analysis using R	p. 186
14.1.4. Analysis using WinBUGS	p. 187
14.2. Zero-inflation	p. 188
14.2.1. Introduction	p. 188
14.2.2. Data generation	p. 190
14.2.3. Analysis using R	p. 190
14.2.4. Analysis using WinBUGS	p. 191
14.3. Offsets	p. 192
14.3.1. Introduction	p. 192
14.3.2. Data generation	p. 193
14.3.3. Analysis using R	p. 193
14.3.4. Analysis using WinBUGS	p. 194
14.4. Summary	p. 194
Exercises	p. 194
15. Poisson ANCOVA	p. 196
15.1. Introduction	p. 196
15.2. Data generation	p. 197
15.3. Analysis using R	p. 199

15.4. Analysis using WinBUGS	p. 200
15.4.1. Fitting the model	p. 200
15.4.2. Forming predictions	p. 202
15.5. Summary	p. 204
Exercises	p. 204
16. Poisson mixed-effects model (Poisson GLMM)	p. 205
16.1. Introduction	p. 205
16.2. Data generation	p. 206
16.3. Analysis under a random-coefficients model	p. 208
16.3.1. Analysis using R	p. 209
16.3.2. Analysis using WinBUGS	p. 209
16.4. Summary	p. 211
Exercises	p. 211
17. Binomial t-test	p. 212
17.1. Introduction	p. 212
17.2. Data generation	p. 214
17.3. Analysis using R	p. 214
17.4. Analysis using WinBUGS	p. 215
17.5. Summary	p. 217
Exercises	p. 217
18. Binomial ANCOVA	p. 218
18.1. Introduction	p. 218
18.2. Data generation	p. 219
18.3. Analysis using R	p. 222
18.4. Analysis using WinBUGS	p. 222
18.5. Summary	p. 226
Exercises	p. 227
19. Binomial mixed-effects model (Binomial GLMM)	p. 228
19.1. Introduction	p. 228
19.2. Data generation	p. 229
19.3. Analysis under a random-coefficients model	p. 232
19.3.1. Analysis using R	p. 233
19.3.2. Analysis using WinBUGS	p. 233
19.4. Summary	p. 235
Exercises	p. 235
20. Non-standard GLMMs 1: Site-occupancy species distribution model	p. 236
20.1. Introduction	p. 236
20.2. Data generation	p. 241
20.3. Analysis using WinBUGS	p. 245
20.4. Summary	p. 250
Exercises	P. 251
21. Non-standard GLMMs 2: Binomial mixture model for the modeling of abundance	p. 253
21.1. Introduction	p. 253
21.2. Data generation	p. 256
21.3. Analysis using WinBUGS	p. 263
21.4. Summary	p. 274
Exercises	p. 274
22. Conclusions	p. 276
References	p. 279
